SYSTEM DESIGN

- The source water is analyzed to determine the highest possible levels of contaminants. Factors considered may include:
 - Bacterial load
 - Temperature fluctuations
 - In-organic contaminant level testing
 - pH
- Only after the water analysis is complete and all factors are considered, is the necessary equipment selected.

WATER SOFTENER

Ion exchange process:

- Removes **calcium & magnesium** "hardness" ions
- Adds "soft" **sodium**

PURIFICATION COMPONENTS

- ❑ Reverse Osmosis (RO)
- ❑ Deionization (DI) + Ultrafiltration (UF)

REVERSE OSMOSIS

- ❑ Pump & membrane system *reverses* osmotic flow to produce purified water
- ❑ Removes **chemicals, bacteria & endotoxin**

RO SYSTEM

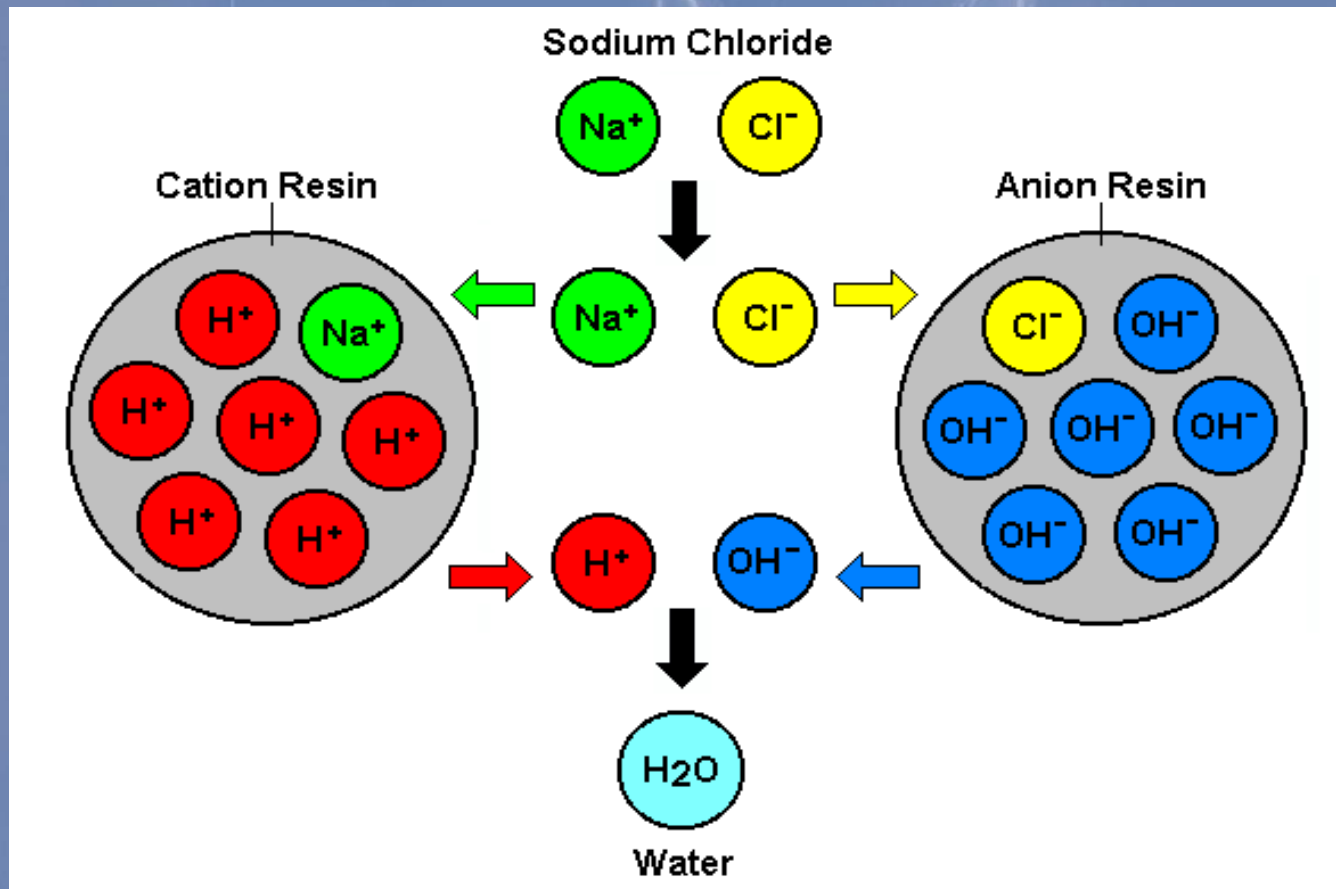

DaVita®

DEIONIZATION

- ❑ Ion exchange process removes both **cations & anions**
- ❑ DANGEROUS when exhausted
- ❑ Often increase bacterial & endotoxin

ULTRAFILTRATION

- ❑ Filtration process removes **bacteria & endotoxin**
- ❑ Required downstream of **Ultraviolet Irradiators (UV)**
